

Acute Hazardous Waste (“P” List)

- Acrolein aka 2-propenal
- Allyl alcohol aka 2-propenol
- Ammonium vanadate (NH_4VO_3)
- Arsenic compounds
- Aziridine aka ethyleneimine
- Benzyl chloride
- Beryllium powder (Be^0)
- Bis(chloromethyl)ether aka dichloromethyl ether
- Bromoacetone aka 1-Bromo-propanone
- Brucine
- Carbon disulfide (CS_2)
- Phosgene aka carbonic dichloride (COCl_2)
- Chloroacetaldehyde
- 3-Chloropropionitrile
- Cyanide Salts
- Cyanogens eg ethanedinitrile
- 2,4-DNP aka 2,4-Dinitrophenol
- Fluoroacetamide
- 2-Methylaziridine aka 1,2-Propylenimine
- Acetocyanohydrin aka Methyl lactonitrile
- Methylhydrazine ($\text{CH}_3(\text{NH})\text{NH}_2$)
- Osmium tetroxide (OsO_4)
- *p*-Chloroaniline aka 4-Chloro-benzenamine
- *p*-Nitroaniline aka 4-Nitro-benzenamine
- Phenylmercury acetate
- Propargyl alcohol
- 4-Aminopyridine aka 4-Pyridinamine
- Sodium azide (NaN_3)
- Sodium fluoroacetate
- Strychnine
- Tetranitromethane ($\text{C}(\text{NO}_2)_4$)
- Thallium Salts
- Thiophenol aka benzenethiol
- Thioureas
- Vanadium oxide aka vanadium pentoxide (V_2O_5)
- Warfarin aka coumafene

Acrolein

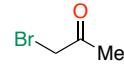

Allyl alcohol

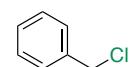

Aziridine

Bis(chloromethyl)ether

Bromoacetone

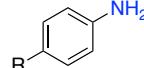

Benzyl chloride

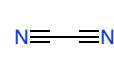

Chloroacetaldehyde

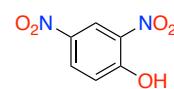

3-Chloropropionitrile

R = Cl or NO₂

Cyanogen

2,4-Dinitrophenol

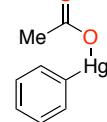

Fluoroacetamide

Methylhydrazine

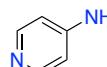

Methyl lactonitrile

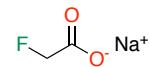

Phenylmercury acetate

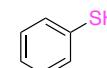

Propargyl alcohol

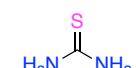

4-Pyridinamine

Sodium fluoroacetate

Thiophenol

Thiourea

Acutely toxic waste must be accumulated in a separate waste container at volumes <1 L at a time. Be sure to seek further information on handling, alternatives, and neutralization techniques before working with these compounds. You can find the current full list on the EPA's website under hazardous waste.
